

are in rows and column / tables •

- Companies would want to use a data-lake over data warehouse because a data lake does not restrict them on what type of data must be stored e.g. data lake stores:
Audio, logs, social media etc (Techtarget.com)

④ A data mart is a specialized and smaller subset of a data warehouse used to serve the analytical and reporting needs of a specific business unit in an organisation e.g. used for finance only.

- It relate to data warehouse in the sense that they both serves as a central location for decision and analysis.
(geekstorgeeks.org)

⑤ → structured data - is data in a table format.
e.g. excel spreadsheet

→ Semi-structured - data that does not follow a specific format, but it still have some key to make it identifiable e.g. CSV file

→ unstructured data is data without a format
e.g. music
