

④ DELETE (delete) → used to remove a specific resource from the server, like PUT, it is idempotent. If you delete a resource once, subsequent requests to delete that same resource will not have any additional effect.

② JSON (Javascript Object Notation) is a lightweight text-based format used to store and exchange information.

→ JSON has become the standard for API development and data transfer because it

- is:
- ① Lightweight
 - ② Human-Readable
 - ③ Easy for machines to parse
 - ④ Language-independent
 - ⑤ flexible.

Example of JSON object

```
{
  "name": "Alice Brown",
  "age": 30,
  "isSubscriber": true,
  "hobbies": ["coding", "hiking", "photography"],
  "Address": "New York",
  "Zipcode": "10001"
}
```
