

the findings.

(28) Python is a high-level, general-purpose programming language known for its simplicity and readability.

* It is ~~the~~ considered one of the most popular programming language for data analytics or AI because of the following Reasons :-

- (A) Ease of use $\rightarrow$ its intuitive syntax
- (B) Extensive ecosystem $\rightarrow$ it acts as a "one stop shop"
- (C) Versatility $\rightarrow$ capable of handling the entire data work
- (D) Strong community support $\rightarrow$ As an open-source language

(29) Four Essential Python Libraries for Data work

(1) Pandas $\rightarrow$ is the most popular library for data analysis and manipulation, it introduces high-performance structures like the Dataframe.

(2) Numpy (numeric python) this is the foundational library for scientific computing, it provides support for large, multi-dimensional arrays and matrices along with a collection of high-level mathematical functions to operate on them.
