

⊛ Builds trust → organizations that secure and respect personal data builds loyal consumer relationships

⊛ Ensures Accountability → it sets strict boundaries on business, forcing them to implement strong security measures to prevent data breaches.

→ The General Data Protection Regulation (GDPR) is a comprehensive data protection and privacy law created and enforced by the European Union.

→ The GDPR applies to any organisation or business outside of the regions → includes those in S.A. as long as they offer goods or services to monitor the behavior of individuals located within Europe.

③ Data ethics is the branch of moral philosophy that guides the responsible collection, processing and use of data.

→ Three examples of unethical use of data or AI

①. Biased AI in hiring Algorithms
Unethical use: A company uses an artificial intelligence system to screen job resumes to increase efficiency.

Problematic: The AI replaces and automates historical prejudices, rather than acting as an objective tool.
