② Unauthorized Data Profiling

unethical use: An analytics firm gathers vast amounts of personal data from millions of social media users under the guise of academic Research, but without explicit, informed consent.

Problematic: The practice violates core principles of consent and informational privacy, it commodifies personal data without user knowledge.

③ Deepfakes and AI-Generated Misinformation

unethical use: Malicious actors use generative AI to create highly realistic, fabricated videos or audio recordings (deepfakes) of political figures or celebrities.

Problematic: Deepfake erode the boundary between truth and falsehood.

③ Data governance is a structured discipline that sets the policies, processes, and role required to manage and protect an organization's data assets.
