| Role           | Primary focus                                                                                                 | Key skills                                                                         | Common Tools                                |
|----------------|---------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|---------------------------------------------|
| Data Analyst   | Interpreting the past by finding patterns, create dashboards and Answering business questions                 | Data visualisation, statistical analysis, SQL and business communication           | SQL, PowerBI, Tableau, Excel, Looker        |
| Data Scientist | Predicting the future by building & training machine learning models to identify complex trends               | Advanced Math, Statistics, Machine learning and deep programming                   | Python, R, Tensorflow, Pytorch, Jupyter     |
| Data Engineer  | Building the foundation by creating and maintaining the pipelines that collect, store, and move data at scale | Database architecture distributed system, pipeline building and system reliability | SQL, Apache Kafka, Snowflake, AWS/GCP/Azure |
| AI Engineer    | creating Applications by integrating AI/ML models into functional software systems and APIs                   | Software Engineering, API development, System integration and prompt Engineering   | Python, Langchain, Docker, Hugging face.    |
