

④ Technology & Tools: Platforms → such as data catalogs and master data management system → used to track data lineage, automate workflows, and enforce security policies.

32 Bias AI refers to systematic, unfair outcomes produced by an artificial intelligence system that disproportionately favor or disadvantage certain groups

→ An AI model is biased when it learns prejudiced assumptions or skewed patterns from its training data, causing it to perpetuate real-world discrimination

e.g. Biased training data: If the data used to train the model is incomplete unrepresentative or reflects historical inequalities, the AI will internalize those flaws

Algorithmic Prejudice: If the data used to train the model is / The model generates skewed predictions, incorrect classifications, or discriminatory results against specific demographics (often based on race, gender or age)

Consequences

- ① Exclusion & Inequality
- ② Amplified stereotypes
- ③ Legal and financial repercussions
- ④ Erosion of trust
