

34) Business intelligence (BI) is a technology-driven process for analysing data and delivering actionable information that helps executives, managers and workers make informed business decisions.

### BI tools

#### 1) Microsoft BI

- Integrates seamlessly with Microsoft products, connects to hundreds of data sources, creates interactive dashboards and reports.

#### 2) Tableau

- Excels in advanced data visualisations, handles massive, complex enterprise ~~database~~ datasets easily, features powerful drag-and-drop analytics capabilities.

36) Bigs AI was difficult for me to understand mainly because it was the first time I hear of it. Did a research of it more on website → [palantir.com](http://palantir.com), [sap.com](http://sap.com)

35) Bigs AI also was surprising to me that a system can be discriminating.
